A;Introns: 257/2; 454/1
C;Function:
A;Description: hydrolysis of 1,4-beta-D-glucosidic linkages in beta-D-glucans such as A;Description: hydrolysis of 1,4-beta-D-glucosidic linkages in beta-D-glucans such as A;Pathway: cellulose degradation
C;Superfamily: cellulose 1,4-beta-cellobiosidase I; fungal cellulose-binding domain ho C;Keywords: glycosidase; hydrolase; polysaccharide degradation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cellulase (EC 3.2.1.4) A precursor - fungus (Trichoderma reesei)
N;Alternate names: endo-1,4-beta-glucanase; endoglucanase I
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      S

Submitted (AUG-1995) to the EMBL/GenBank/DDBJ databases
-i-FUNCTION: THE BIOLOGICAL CONVERSION OF CELLULOSE TO GLUCOSE
GENERALLY REQUIRES THREE TYPES OF HYDROLYTIC ENZYMES:
(1) ENDOGLUCANASES WHICH CUT INTERNAL BETA-1,4-GLUCOSIDIC BONDS;
(2) EXCCELLOBIOHYDROLASES THAT CUT THE DISSACCHARIDE CELLOBIOSE
FROM THE NONREDUCING END OF THE CELLULOSE POLYMER CHAIN;
(3) BETA-1,4-GLUCOSIDASES WHICH HYDROLYZE THE CELLOBIOSE AND OTHE
SHORT CELLO-OLIGOSACCHARIDES TO GLUCOSE.

                                               FUNCTION: THE BIOLOGICAL CONVERSION OF CELLULOSE TO GLUCOSE GENERALLY REQUIRES THREE TYPES OF HYDROLYTIC ENZYMES:

(1) ENDOCALUCANASES WHICH CUT INVERNAL BETA-1,4-GLUCOSIDIC BONDS;

(2) EXOCELLOBIOHYDROLASES THAT CUT THE DISSACCHARIDE CELLOBIOSE FROM THE NOWREDUCING END OF THE CELLULOSES POLYMER CHAIN;

(3) BETA-1,4-GLUCOSIDASES WHICH HYDROLYZE THE CELLOBIOSE AND OTH SHORT CELLO-OLIGOSACCHARIDES TO GLUCOSE.

SHORT CELLO-OLIGOSACCHARIDES TO GLUCOSE.

CATALYTIC ACTIVITY: Endohydrolysis of 1,4-beta-D-glucosidic linkages in cellulose.

SUBCELLULAR LOCATION: Secreted.

SINGLARITY: BELONGS TO CELLULASE FAMILY C (FAMILY 7 OF GLYCOSYL

PUNCTION: THE BIOLOGICAL CONVERSION OF CELLULOSE TO GLUCOSE

(1) ENDOGLUCANASES WHICH CUT INTERNAL BETA-1, 4-GLUCOSIDIC BONDS;

(2) EXOCELLOBIOHYDROLASES THAT CUT THE DISSACCHARIDE CELLUBIOSE PROM THE NONREDUCING END OF THE CELLULOSE POLYMER CHAIN;

(3) BETA-1, 4-GLUCOSIDASES WHICH HYDROLYZE THE CELLOBIOSE AND OTH SHORT CELLO-OLIGOSACCHARIDES TO GLUCOSE.

SHORT CELLO-OLIGOSACCHARIDES TO GLUCOSE.

-!- CATALYTIC ACTIVITY: Hydrolysis of 1,4-beta-D-glucosidic linkages in cellulose and cellotetraose, releasing cellobiose from the non reducing ends of the chains.
-!- SUBCELLULAR LOCATION: Secreted.
-!- SIMILARITY: BELONGS TO CELLULASE FAMILY C (FAMILY 7 OF GLYCOSYL HYDROLASES).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         01-FEB-1995 (Rel. 31, Created)

"Sequence of cbh-1 gene of Humicola grisea var. thermoidea.";

RU ucleic Acids Res. 18:668-668 (1990).

-!- FUNCTION: THE BIOLOGICAL CONVERSION OF CELLULOSE TO GLUCOSE
GENERALLY REQUIRES THREE TYPES OF HYDROLYTIC ENZYMES:

(1) ENDOGLUCANASES WHICH CUT INTERNAL BETA-1, 4-GLUCOSIDIC BONDS;

(2) EXOCELLOBIOHYDROLASES THAT CUT THE DISSACCHARIDE CELLOBIOSE

CC FROM THE NONREDUCING END OF THE CELLULOSE POLYMER CHAIN;

(3) BETA-1, 4-GLUCOSIDASES WHICH HYDROLYZE THE CELLOBIOSE AND OTHER

CC (3) BETA-1, 4-GLUCOSIDASES WHICH HYDROLYZE THE CELLOBIOSE AND OTHER

CC (3) BETA-1, 4-GLUCOSIDASES WHICH HYDROLYZE THE CELLOBIOSE AND OTHER

CC (4) CATALYTIC ACTIVITY: Hydrolysis of 1,4-beta-D-glucosidic linkages

CC (5) CATALYTIC ACTIVITY: Hydrolysis of 1,4-beta-D-glucosidic linkages

CC (6) CATALYTIC ACTIVITY: Hydrolysis of 1,4-beta-D-glucosidic linkages

CC (7) CATALYTIC BELONGS TO CELLULASE FAMILY C (FAMILY 7 OF GLYCOSYL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

"Novel insecticidal peptides from Tegenaria agrestis spider venom
have a direct effect on the insect central nervous system.";
Arch. Insect Biochem. Physiol. 38:19-31(1998).
-!- FUNCTION: TOXIN THAT PARALYZES INSECTS. MAY HAVE A DIRECT EFFE
ON THE INSECT CENTRAL NERVOUS SYSTEM.
-!- SUBCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Expressed by the venom gland.
                                                                                                                                                Tegenaria agrestis (Spider).
